

Our aluminum Extrusion products are widely applied in various sectors including:

Construction Industry

- Curtain wall sections
- Sliding and casement window sections
- Ground-spring activated and casement door sections

Interior Decoration and Design

- Interior walls, ceilings, panels and louvres
- Fixed light panels
- Display cases
- Guardnets

General Shapes

- Pipes
- Tubes
- Channels

Industrial

- Radiators
- Boxes

Consumer Industry

- Computer hardware
- Point-of-sale displays
- Metal cabinets
- Office equipment
- Door hinges
- Household handles
- Bathroom fixtures
- Sports facilities

Transportation and Media Applications

- Containers
- Vehicle parts
- Street furniture
- Outdoor media panels

889 Global Solutions (China) offers two general types of aluminum extrusions, categorized by the finishing process.

Anodized aluminum extrusion products

Anodized aluminum extrusion products are coated with a durable, porous oxide film (coating thickness ranging from 0.01mm to 0.025mm) either in bronze, natural or black color for the purpose of protecting their surface from atmospheric rust corrosion. 889's aluminum extrusion products meet international industry specifications of various professional institutions.

Paint coated aluminum extrusion products

Paint coated aluminum extrusion products are coated with thin layers of paint to give the surface strong resistance against chipping, cracking, abrasion, erosion and impacts. It provides protection against ultra-violet rays, salt erosion and pulverization.
